GENITO CROSSING
PROFFERED CONDITIONS
CASE NO. 26SN2159
September 1, 2026

The property owner in this case (the "Applicant"), pursuant to Section 15.2-2298 of the Code of Virginia (1950 as amended) and the Zoning Ordinance of Chesterfield County (the "County"), for itself and its successors or assigns, proffers that the use of approximately 14.4 acres of property (comprised of County Tax Map Numbers 744685220700001 and 744685220700002) (collectively, the "Property") as a residential townhouse community, developed within a condominium regime (the "Development"), will be according to the following conditions if, and only if, the request submitted herewith is granted with only those conditions agreed to by the Applicant. In the event this request is denied or approved with conditions not agreed to by the Applicant, the proffer conditions shall immediately be null and void and of no further force or effect.

1. Pattern Book. The Property shall be developed in general conformance with the layout, building illustrations and information set forth in the Genito Crossing Pattern Book dated August 10, 2026, prepared by D.R. Horton and Land Planning Solutions, and filed herewith (the "Pattern Book"), which illustrations and information are conceptual in nature and may vary in detail. In the event a subdivision plan or site plan, as applicable, is not in general conformance with the foregoing, deviations may be approved in any subdivision plan or site plan at the time of plans review, or at any other time permitted by the Planning Director upon the Director's finding that the deviations are generally in keeping with the spirit and concept of the Pattern Book.

2. Conceptual Plan. The Property shall be developed in general conformance with the layout, as shown on Page 3 of the Pattern Book (the "Conceptual Plan"). The Conceptual Plan is conceptual in nature and may vary based on the final approved subdivision plans or site plan, as applicable, depending on the final soil studies, RPA lines, road and alley design, unit count, amenity locations, building footprints, parking design and location, BMP design and location, pedestrian way design and location, and other design or engineering reasons. Any substantive changes that do not relate to the prior sentence shall be approved by the Planning Director at the time of plans review. In the event of any conflict between information shown on the Conceptual Plan and these Proffered Conditions, these Proffered Conditions shall control.

3. Density. The maximum number of condominium units constructed on the Property as part of the Development shall be one hundred and ten (110) units.

4. Connection to County Water/Sewer. The Applicant shall connect the Property to County water and sewer at time of construction.

5. Access. Direct vehicular access to Hull Street Road (Route 360) shall be limited to one (1) access.

6. Internal Roads. Except for alleys shown on the Conceptual Plan, all internal roads shall have a minimum width of thirty four feet (34') from face-of-curb to face-of-curb.

7. Stormwater. The maximum post-development discharge rate for the 100-year storm shall be based on the maximum capacity of the existing facilities downstream, and shall not increase the recorded and/or established 100-year backwater and/or floodplain. On-Site detention of the post-development 100-year discharge rate to below the pre-development 100-year discharge rate may be provided to satisfy this requirement.

8. Sheet Flow. Sheet flow generated from impervious areas on the Property that are adjacent to County Tax Map Numbers 743685464700000, 743685505600000, 743685607100000, 743685706800000, 743685906500000, 743685985700000, 744685075400000, 744685154800000, and 744685263700000, shall either (i) be diverted away from such adjacent properties, or (ii) be otherwise controlled using stormwater control measures, provided that such stormwater control measures are approved by the Director of Environmental Engineering (or a staff member who has been duly-authorized by the Director) at the time of construction plan review.

9. Amenities. Amenities shall be provided as shown on the Conceptual Plan and Page 4 of the Pattern Book, unless otherwise approved at the time of plans review.

10. Security Fence. A 6' high black vinyl-coated, 9 gauge, 1" chain link, mesh security fence, unless otherwise approved by the Police Department (the "Fence") shall be erected on the perimeter of the Property for that portion of the Property that borders County Tax Map Numbers 743684636300000 and 744684145400000 (collectively, "Genito Shopping Center"). The Fence may be modified to include one or more openings or gates for pedestrian access between the Property and Genito Shopping Center, as determined at the time of plans review. In the event that Genito Shopping Center is redeveloped in the future, the gaps in the Fence for pedestrian access may change in order to better facilitate pedestrian access between the Property and Genito Shopping Center. Landscaping, consisting of shrubs or small trees, shall be installed on the project-side of the Fence, unless otherwise approved at the time of plans review.

11. Perimeter Landscaping. For the portion of the Property located adjacent to County Tax Map Number 743684446700000, a 10' landscaped buffer shall be provided. The plantings within the buffer shall include plantings required by Perimeter Landscaping Type B, unless otherwise modified at the time of plans review. Additionally, as shown on the Conceptual Plan, a 6' vinyl fence shall be installed on the Property, along the perimeter of Tax Map Number 743684446700000.

12. Woodsong Drive Buffer. A 50' landscaped buffer shall be provided for the portion of the Property immediately adjacent to Woodsong Drive, as more particularly shown on the Conceptual Plan. Supplemental landscaping to ensure that the minimum landscaped buffer requirements of Table 19.2-35.4 (3 x Landscape B) are provided within the buffer unless otherwise modified at the time of plans review

13. Architectural/Design Elements. All Architectural/Design Elements below are considered minimum standards for the Development of the Property.

a. Style and Form. Construction of the townhome buildings shall be in general conformance with the architectural appearance shown on the illustrative elevations depicted on Page 6 of the Pattern Book or another architectural appearance approved by the Planning Director at the time of plans review.
b. Porches and Stoops. Each dwelling unit shall include either a front stoop or porch, and each front stoop or porch shall be constructed with continuous foundation walls or masonry piers to match the foundation of the home.
c. Exterior Facades.

i. Façade Materials. Acceptable siding materials include brick, stone, masonry, horizontal lap siding, vertical siding, or a combination thereof. Siding is permitted to be manufactured from cement fiber board (such as HardiePlank, HardieShingle, or HardieTrim) or may be premium quality vinyl siding or another material approved by the Planning Department. Premium quality vinyl is defined as vinyl siding with a minimum wall thickness of 0.044 inches. Plywood and metal siding shall not be permitted.

ii. Foundation Masonry. There shall be a minimum vertical height of eighteen (18) inches of brick, brick veneer, stone, stone veneer, or other masonry material approved by the Planning Director installed above grade for units with slab-on-grade foundations on all front, side, and rear elevations. All foundations shall be faced entirely of brick, brick veneer, stone, stone veneer, cultured stone, and/or other masonry materials; except (i) for units where the grade drops along the façade foundation, this required masonry may step down at eighteen inch (18") intervals, and (ii) for units with a walkout basement, siding may continue to the ground level of a walkout basement (aa) if there is a window or door that shows the presence of a basement floor or (bb) if there is a first floor deck. Synthetic or natural stucco foundations may be permitted for facades constructed entirely of stucco. An alternative foundation masonry requirement may be approved by the Planning Director at the time of plans review.

iii. Roofs. Roof materials shall be standing seam metal or architectural dimensional shingles with algae protection and having a minimum thirty (30) year warranty.

iv. Variation in Front Elevations. Dwelling units within the same townhouse building with the same front elevation may not be attached to each other. Variation in the front elevation may not be achieved by simply mirroring the façade, but may be accomplished by providing at least two (2) of the following architectural changes:

1. Adding masonry elements above the masonry required in proffer 13(c)(ii).
2. Changing the location of roof type, roof line, front facing gable(s) and/or dormers.
3. Changing the style of roof type, roof line, front facing gable(s) and/or dormers.
4. Providing varied siding application using horizontal siding, shake siding or board and batten siding.
5. Providing varied color application.
6. Adding projections such as bay/box windows, second floor balconies, or accent roofs.
7. Adding a third (3rd) enhanced feature to a garage door.
8. Any other element of architectural variation as approved by the Planning Director at the time of plans review.

The above variation obligation in above proffer may be achieved on a building by building basis only if approved by the Planning Director at the time of plans review and approval.

14. Driveways and Front Walks. The Development's driveways shall be constructed of asphalt or brushed or stamped concrete. If a driveway connects to a sidewalk, then the length of the driveway shall be a minimum of twenty feet (20') as measured from the back of such sidewalk and the face of a front-loaded garage door. Front walks leading from dwelling units to driveways shall be a minimum of three (3) feet in width and constructed of brushed or stamped concrete.

15. Garages. Garages shall use an upgraded garage door. An upgraded garage door is any door with a minimum of two (2) enhanced features. Enhanced features shall include windows, raised panels, decorative panels, arches, ornamental hardware or other architectural features on the exterior that enhance the entry (i.e., decorative lintels, shed roof overhangs, arches, columns, keystones, eyebrows, etc.). Flat panel garage doors are prohibited.

16. Unit Landscaping. The entire front façades of all units as well as any side façades facing streets shall have foundation plantings. Foundation planting beds shall be a minimum of four (4) feet wide from the unit foundation. Foundation plantings shall include a combination of plant and shrub material spaced a maximum of four (4) feet apart. Vertical accent shrubs or small evergreen trees shall be used at building corners to soften the visual impact.

17. Location of Heating, Ventilation and Air Conditioning (HVAC) Units and House Generators. HVAC Units and House Generators shall either be initially screened by landscaping or low maintenance material (as approved by the Planning Department) when visible from a road or they shall be located at the rear of the dwelling units that they serve in the Development.

18. Lighting.

a. CBU Lighting. Full cut-off, photocell-activated, minimum 70 CRI-rated LED luminaires shall illuminate areas within 20 feet of the cluster mailbox units (CBUs) with a minimum maintained illumination level of 0.5 foot-candles, as measured at grade.

b. Parking Space Lighting. Hardwired, pole-mounted, full cut-off, photocell-activated, minimum 70 CRI-rated LED luminaires shall common non-parallel parking spaces with a minimum maintained illumination level of 0.5 foot-candles.

c. Pedestrian Lighting. A post light will be placed in the front yard or a carriage light will be placed over the garage.

19. Direct Vent Fireplace. Direct vent gas fireplace boxes, which protrude beyond the exterior face of the townhome dwelling unit, are not permitted on front façades. All the exterior materials and finishes used to enclose the fireplace box must match the adjacent façade.

20. Condominium Unit Square Footage. The minimum square footage for each condominium unit will be 1,200 square feet.

21. Hydraulic Analysis. The owner of the Property shall perform a hydraulic analysis of the County's adjacent wastewater system to verify adequate capacity exists prior to or in conjunction with the first site plan submittal. Any capacity related improvements required to support the demands of this project shall be reflected on the site plan and will be the responsibility of the owner of the Property.

22. Tree Preservation. Healthy trees and shrubs existing within the required 50' buffer adjacent to the single-family detached homes located within the Genito Forest subdivision shall be preserved; provided that, uses allowed within the buffer per the Zoning Ordinance shall be permitted. The determination of what constitutes a "healthy" tree or shrub shall be made by a certified arborist. Any trees or shrubs removed pursuant to this proffer must be replaced in accordance with the Zoning Ordinance's landscaping requirements.
